

WATER MASTER™ VACUUM TANKERS

WATER MASTER

Developed by fire chief Reggie Ridgway, Water Master vacuum tankers are designed to be easy to use and safe to operate.

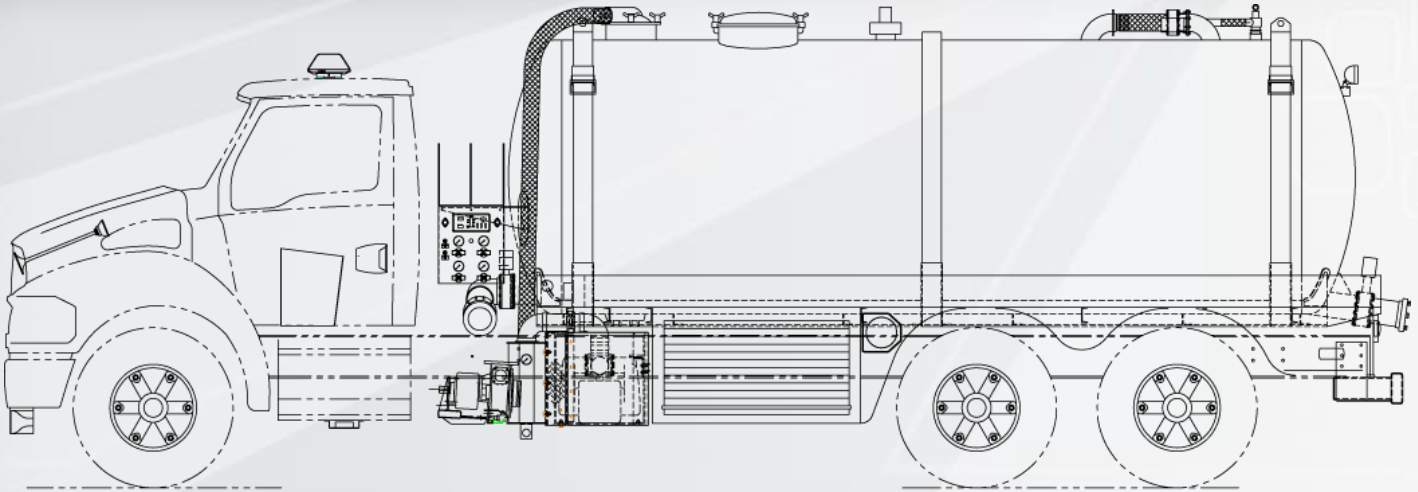

Featuring a unique self-filling vacuum system, Water Master vacuum tankers can be filled at up to 2000 gallons per minute without a Class A pumper. The tankers can self-fill from up to three suction inlets using almost any alternative water source including ponds, rivers, lakes, ditches and swimming pools. The units feature baffled aluminum tanks holding up to 4000 gallons of water and come standard with a 460 cubic feet per minute vacuum pump, allowing one operator to deliver more than 250 gallons per minute in a three mile shuttle.

Water Master vacuum tankers were designed from the ground up to deliver the maximum amount of water to the scene with the minimum amount of personnel.
